Answer:

Explanation:

Explanation:

Box 1: id

id is a unique identifier for the event.

Box 2: eventType

eventType is one of the registered event types for this event source.

Box 3: dataVersion

dataVersion is the schema version of the data object. The publisher defines the schema version.

Scenario: Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.

The following example shows the properties that are used by all event publishers:

```
[
{
"topic": string,
"subject": string,
"id": string,
"eventType": string,
"eventTime": string,
"data":{
object-unique-to-each-publisher
},
"dataVersion": string,
"metadataVersion": string
}
]
```

NEW QUESTION: 2

Which statement is true regarding communication between the WDS and other APs in a WLAN setup using WDS?

- A.** Communication is protected using a Context Transfer Key, which is manually configured on the AP.
- B.** Communication is protected using a Context Transfer Key, which is negotiated during WDS authentication.
- C.** Communication is protected using X.509 certificates, which can be either self-signed or manufacturer-installed.
- D.** Communication is protected using multicast traffic, which is restricted to the local Layer 2 network.

Answer: B

NEW QUESTION: 3

Oracle Fusion Territory management is used in an organization to assign sales accounts, leaders, and opportunities. It is also used to generate Business Intelligence reports. Identify three territory management-related setup tasks that have to be performed by the territory administrator while configuring

territories.

- A. Quota
- B. Identify visible members.
- C. Lookups
- D. Enable dimensions and metrics.
- E. Forecast

Answer: A,B,D

Explanation:

Cube

Territory Management generates the cube based on the enabled dimensions and their members. Territory Management loads the cube with dimension members and metrics directly from the data warehouse, in the case of the data warehouse option, or from Fusion Applications, in the case of the non-data warehouse option. The cube provides metrics information for defined territories.

Sequence

There are several aspects to enabling and populating dimension members, including setting profile options for certain dimensions.

Following is the sequence for populating dimensions for use in defining territories:

1. Change profile options for industry classification category or the classification category for auxiliary dimensions 1, 2, or 3.
2. If you are using data warehouse, then run ETL to populate the data warehouse with the dimension members and transactional data.
3. In Territory Management, identify the dimension members to be made visible in selection lists for defining territories. (A) Refresh the members before making visibility selections.
4. If you are using data warehouse, then run ETL to populate the data warehouse with visibility settings.
5. Use the stage environment in Territory Management to enable dimensions. Execute the Stage action which synchronizes the Territory Management stage environment with the data source. You can start defining territories using newly enabled and populated dimensions after you promote the stage environment to production.
