NEW QUESTION: 3

You need to ensure that URLs for log manipulation are mapped to the controller.

You have the following code:

Which code segments should you include in Target 1 and Target 2 to map the URLs? To answer, drag the appropriate code segments to the correct targets. Each code segment may be used once, more than once, or not at all. You need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Target 1: routes.MapRoute(

The MapRoute method takes three parameters: routes, name, and URL.

Target 2: url: "GetLog/{action}/{id}",

Examplecode:

```
routes.MapRoute(
    "Default", // Route name
    "{controller}/{action}/{id}", // URL with parameters
    new { controller = "Home", action = "Index", id = "" } //
    Parameter defaults ); Incorrect:
```

Not routes.MapHttpRequestRoute(:

The MapHttpRequestRoute method takes three parameters: routes, name, and routeTemplate, but we need an URL parameter, not a routeTemplate parameter.
