**NEW QUESTION: 1**

Your network contains an Active Directory domain named contoso.com.

You deploy Remote Desktop Services (RDS).

You create a session collection named Collection1.

You plan to configure Collection1 to use user profile disks.

You need to identify what must be created before you configure Collection1 to use the user profile disks.

What should you identify?

**A.** A VHD file

- B. A storage pool
- C. A VHDX file
- D. A network share

**Answer: D**

**NEW QUESTION: 2**

What are three requirements for a VMware HA cluster? Select three

- A. identical type and quantity of CPUs in each host
- B. name resolution between all hosts
- C. private Gigabit Ethernet network for all hosts.
- D. access to shared storage from all hosts
- E. access to the virtual machine networks from all hosts

**Answer: B,D,E**

Explanation:

Clusters Enabled for HA For clusters enabled for HA, all virtual machines and their configuration files must reside on shared storage (typically a SAN), because you must be able to power on the virtual machine on any host in the cluster. This also means that the hosts must be configured to have access to the same virtual machine network and to other resources. Each host in an HA cluster must be able to resolve the host name and IP address of all other hosts in the cluster. To achieve this, you can either set up DNS on each host (preferred) or fill in the /etc/hosts entries manually (error prone and discouraged).

**NEW QUESTION: 3**

A data breach has occurred and your company database has been copied. Which security principle has been violated?

- A. confidentiality
- B. control
- C. availability
- D. access

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

IF the data breach is occurred within the company and the database has been copied, the confidentiality has been breached.

An employee may steal valuable trade secret information as seen at DuPont. However, not every business has these types of trade secrets. The type of information an employee is most likely to steal is the information needed to do his or her specific job, usually information that is readily available to them. To maintain a competitive advantage, the electronic information an employee uses everyday must be protected. Everyday employees have access to a wide variety of electronic information which range from important (email lists and non-financial business

information), to confidential (customer information), to private (employee records), through the most sensitive and potentially damaging data: financial records, databases with enormous company history, trade secrets and intellectual property.

#### **NEW QUESTION: 4**

All keys used for intermediate output from mappers must:

- A.** Implement WritableComparable.
- B.** Implement a comparator for speedy sorting.
- C.** Implement a splittable compression algorithm.
- D.** Override isSplittable.
- E.** Be a subclass of FileInputFormat.

**Answer: A**

Explanation:

The MapReduce framework operates exclusively on <key, value> pairs, that is, the framework views the input to the job as a set of <key, value> pairs and produces a set of <key, value> pairs as the output of the job, conceivably of different types.

The key and value classes have to be serializable by the framework and hence need to implement the Writable interface. Additionally, the key classes have to implement the WritableComparable interface to facilitate sorting by the framework.
