Answer: C

NEW QUESTION: 3
Web Services are a natural fit for building distributed
computing platforms. Which of the following qualities of Web
Services make them suitable for distributed computing?
A. WSDL,SOAPand XML promote language and platform Independence
and interoperability
B. Web Services are deployed to the web tier of the distributed
architecture.
C. WSDL can be used to define components that can be
distributed in multiple servers.
D. UDDI allows services deployed in a distributed
infrastructure to be discovered and consumed.
Answer: A,D
Explanation:
Web Services are a natural fit for building distributed
computing platforms.
*WSDL, SOAP, and XML promote language and platform independence
and interoperability.
*UDDI allows services deployed in a distributed infrastructure
to be discovered and consumed.
*Simple Object Access Protocol (SOAP) enables service binding
and invocation using standards based protocols such as HTTP and
JMS.
The platform for SOA should support the WS- standards
Note: Openness is the property of distributed systems such that
each subsystem is continually open to interaction with other
systems. Web services protocols are standards which enable
distributed systems to be extended and scaled. In general, an
open system that scales has an advantage over a perfectly
closed and self-contained system.
