#### **NEW QUESTION: 1**

Note: This question is part of a series of question that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all.

Your network contains an Active Directory domain. Your company

provides VPN access for multiple organizations.

You need to configure Network Policy Server (NPS) to forward authentication requests to the appropriate organization.

What should you configure on the NPS server?

- A. System Health Validators (SHVs)
- B. the Windows Authentication authentication provider
- C. the RADIUS Accounting accounting provider
- D. the Windows Accounting accounting provider
- E. the RADIUS Authentication authentication provider
- F. IKEv2 client connections
- G. Remediation Server groups
- H. Group Policy preferences
- I. Health policies
- J. Connection Request policies

**Answer: J**

Explanation:

Connection request policies are sets of conditions and settings that allow network administrators to designate which Remote Authentication Dial-In User Service (RADIUS) servers perform the authentication and authorization of connection requests that the server running Network Policy Server (NPS) receives from RADIUS clients. Connection request policies can be configured to designate which RADIUS servers are used for RADIUS accounting.

This question can show up with slightly different wording or even more limited answer choices. Focus on the fact that Connection Request policies allow us to forward authentication to the right domains in partnered domains.

### NEW QUESTION: 2

Scenario: Your company has a main office and a branch office. The main office has a Windows Server 2012 R2 server named Server1. The branch office has a Windows Server 2012 R2 server named Server2. Server1 and Server2 are members of the same Active Directory domain. Server1 is configured as a Network Policy Server (NPS) and is used to manage network access for the main office. Server2 is configured as a Network Policy Server (NPS) and is used to manage network access for the branch office. You need to configure Server2 to forward authentication requests to Server1. What should you configure on Server2?

- A. System Health Validators (SHVs)
- B. the Windows Authentication authentication provider
- C. the RADIUS Accounting accounting provider
- D. the Windows Accounting accounting provider
- E. the RADIUS Authentication authentication provider
- F. IKEv2 client connections
