Explanation

3-2 - Configuration Wizards

NEW QUESTION: 4

DB1 is an Azure SQL Database. You need to ensure that all data in the database is encrypted at rest. Which configuration wizard should you use?

- A. Always Encrypted
- B. Transparent Data Encryption
- C. Column Encryption Key
- D. Dynamic Data Masking

DB1 is an Azure SQL Database. You need to ensure that all data in the database is encrypted at rest. Which configuration wizard should you use?

Answer:

Explanation:

Explanation

DB1: Transparent Data Encryption

Azure SQL Database currently supports encryption at rest for Microsoft-managed service side and client-side encryption scenarios.

Support for server encryption is currently provided through the SQL feature called Transparent Data Encryption.

Columns: Always encrypted

Always Encrypted is a feature designed to protect sensitive data stored in Azure SQL Database or SQL Server databases.

Always Encrypted allows clients to encrypt sensitive data inside client applications and never reveal the encryption keys to the database engine (SQL Database or SQL Server).

Note: Most data breaches involve the theft of critical data such as credit card numbers or personally identifiable information. Databases can be treasure troves of sensitive information. They can contain customers' personal data (like national identification numbers), confidential competitive information, and intellectual property. Lost or stolen data, especially customer data, can result in brand damage, competitive disadvantage, and serious fines--even lawsuits.
