NEW QUESTION: 1

```
proc print data=SASHELP.CLASS(firstobs=5 obs=15);
```

```
where Sex='M';  
run;
```

- A. Option C
- B. Option A
- C. Option D
- D. Option B

Answer: C

NEW QUESTION: 2

While examining excessive traffic on the network, it is noted that all incoming packets on an interface appear to be allowed even though an IPv4 ACL is applied to the interface.

Which two misconfigurations cause this behavior? (Choose two.)

- A. A matching permit statement is too broadly defined
- B. A matching deny statement is too high in the access list
- C. The ACL is empty
- D. A matching permit statement is too high in the access list
- E. The packets fail to match any permit statement

Answer: A,D

NEW QUESTION: 3

Refer to the exhibit.

The exhibit shows an N-to-1 cluster configuration, in which nodes are connected to storage devices via dual-hosted SCSI cables.

Why is this an inefficient configuration?

- A. Clusters should have at most two nodes.
- B. NAS is preferred over SAN for shared storage.
- C. Storage should be shared by more than two nodes.
- D. NFS is the preferred way to share storage within a cluster.

Answer: C

NEW QUESTION: 4

You are the system administrator for a company. You have a developer that uses Storage Spaces on their Windows 10 device. The developer has a storage pool that contains five drives. You add four drives to the existing pool on the developer's computer.

You need to ensure that the developer can quickly use the space of the new drives.

Which command or Windows PowerShell cmdlet should you run?

- A. defrag
- B. diskpart
- C. Optimize-StoragePool
- D. fsutil

E. Enable-StorageHighAvailability

Answer: C

Explanation:

Explanation
