NEW QUESTION: 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of the repeated scenario

Your network contains an Active Directory domain named contoso.com. The functional level of the domain is Windows Server 2012.

The network uses an address space of 192.168.0.0/16 and contains multiple subnets.

The network is not connected to the Internet.

The domain contains three servers configured as shown in the following table.

Client computers obtain TCP/IP settings from Server3.
You add a second network adapter to Server2. You connect the new network adapter to the Internet. You install the Routing role service on Server2.
Server1 has four DNS zones configured as shown in the following table.

End of the repeated scenario

You need to ensure that when computers query for records in tailspintoys.com, the query results are based on the subnet of the computer that generates the query.

What should you do?

- A. Enable DNS round robin.
- B. Modify the Priority settings of each resource record.
- C. Create zone delegation records.
- D. Configure DNS policies.
