Explanation:

Origin Management

An origin is an endpoint (typically an IP address) of the application protected by the WAF. An origin can be an Oracle Cloud Infrastructure load balancer public IP address. A load balancer IP address can be used for high availability to an origin. Multiple origins can be defined, but only a single origin can be active for a WAF. You can set HTTP headers for outbound traffic from the WAF to the origin server. These name value pairs are then available to the application.

Oracle Cloud Infrastructure Web Application Firewall (WAF) is a cloud-based, Payment Card Industry (PCI) compliant, global security service that protects applications from malicious and unwanted internet traffic.

WAF can protect any internet facing endpoint, providing consistent rule enforcement across a customer's applications. WAF provides you with the ability to create and manage rules for internet threats including Cross-Site Scripting (XSS), SQL Injection and other OWASP-defined vulnerabilities. Unwanted bots can be mitigated while tactically allowed desirable bots to enter. Access rules can limit based on geography or the signature of the request.

Distributed Denial of Service (DDoS)

A DDoS attack is an often intentional attack that consumes an entity's resources, usually using a large number of distributed sources. DDoS can be categorized into either Layer 7 or Layer 3/4 (L3/4) A layer 7 DDoS attack is a DDoS attack that sends HTTP/S traffic to consume resources and hamper a website's ability to delivery content or to harm the owner of the site. The Web Application Firewall (WAF) service can protect layer 7 HTTP-based resources from layer 7 DDoS and other web application attack vectors.

**NEW QUESTION: 2**

For the network segments: 172.128.12.0, 172.128.17.0, 172.128.18.0, 172.128.19.0, which of the following network segments is most desirable to be used to implement route aggregation?

A. 172.128.20.0/20

B. 172.128.17.0/21

C. 172.128.0.0/21

D. 172.128.12.0/22

**Answer: C**

**NEW QUESTION: 3**

You have been asked to design the storage layer for an application. The application requires disk performance of at least 100,000 IOPS. In addition, the storage layer must be able to survive the loss of an individual disk, EC2 instance, or Availability Zone without any data loss.

The volume you provide must have a capacity of at least 3 TB. Which of the following designs will meet these objectives?

**A.** Instantiate an i3 8xlarge instance in us-east-1a.

Create a RAID 0 volume using the four 800GB SSD ephemeral disks provided with the instance.

Provision 3x1TB EBS volumes, attach them to the instance, and configure them as a second RAID 0 volume.

Configure synchronous, block-level replication from the ephemeral-backed volume to the EBS-backed volume.

**B.** Instantiate a c3 8xlarge instance in us-east-1.

Provision an AWS Storage Gateway and configure it for 3 TB of storage and 100,000 IOPS.

Attach the volume to the instance.

**C.** Instantiate a c3 8xlarge instance in us-east-1.

Provision 4x1TB EBS volumes, attach them to the instance, and configure them as a single RAID

5 volume.

Ensure that EBS snapshots are performed every 15 minutes.

**D.** Instantiate an i3 8xlarge instance in us-east-1a.

Create a RAID 0 volume using the four 800GB SSD ephemeral disks provided with the instance.

Configure synchronous, block-level replication to an identically configured instance in us-east-1b.

**E.** Instantiate a c3 8xlarge instance in us-east-1.

Provision 3x1TB EBS volumes, attach them to the Instance, and configure them as a single RAID

0 volume.

Ensure that EBS snapshots are performed every 15 minutes.

**Answer: D**

Explanation:

It doesn't protect against a loss of two EC2 instances or two AZs, but the question asks about protection of ONE disk, EC2 instance or AZ loss.

#### **NEW QUESTION: 4**

Which Cisco IOS feature is used to enable the following class map configuration?

```
class-map match-all test-cm
```

```
match protocol gnutella file-transfer "*"
```

**A.** CAR

**B.** NBAR

**C.** NetFlow

**D.** Flexible Packets Matching

**E. CBWFQ**
