**NEW QUESTION: 4**

Which two of these statements regarding RSTP are correct? (Choose two.)

- A. RSTP is a proprietary implementation of IEEE 802.1D STP.
- B. RSTP is compatible with the original IEEE 802.1D STP.
- C. RSTP defines new port roles.
- D. RSTP defines no new port states.
- E. RSTP cannot operate with PVST+.

**Answer: B,C**

## Explanation:

When network topology changes, rapid spanning tree protocol (IEEE802.1W, referred to as RSTP) will speed up significantly the speed to re-calculate spanning tree. RSTP not only defines the role of other ports: alternative port and backup port, but also defines status of 3 ports: discarding status, learning status, forwarding status. RSTP is 802.1D standard evolution, not revolution. It retains most of the parameters, and makes no changes.
