NEW QUESTION: 1
You need to set up a complex network infrastructure for your
organization that will be reasonably easy to deploy, replicate,
control, and track changes on. Which AWS service would be best
to use to help you accomplish this?
A. Amazon CloudWatch
B. AWS Import/Export
C. Amazon Route 53
D. AWS CloudFormation
Answer: D
Explanation:
Explanation/Reference:
Explanation:
AWS CloudFormation is a service that helps you model and set up
your Amazon Web Services resources so that you can spend less
time managing those resources and more time focusing on your
applications that run in AWS. You create a template that
describes all the AWS resources that you want (like Amazon EC2
instances or Amazon RDS DB instances), and AWS CloudFormation
takes care of provisioning and configuring those resources for
you. You don't need to individually create and configure AWS
resources and figure out what's dependent on what. AWS
CloudFormation handles all of that.

C. Check the duplex mode for SwitchC's fa0/1 port.
D. Check the trunk encapsulation mode for SwitchA's fa0/2 port.
Answer: B

Here we can see that this port is configured for full duplex,
so the next step would be to check the duplex setting of the
