she said that now whatsoever would happen, Valid C\_BW4HANA\_24 Dumps Demo we would see, I had to read as much as I could,

Choosing right study materials is a smart way for most office workers who have enough time and energy to attending classes about C\_BW4HANA\_24 reliable study questions.

How can we pass exam at first shot, You can have a preview of the C\_BW4HANA\_24 practice pdf, If you want to own a product that offers various kinds of service, our C\_BW4HANA\_24 exam torrent files are your best choice.

Free PDF 2022 C\_BW4HANA\_24: Updated SAP Certified Application Associate - Reporting. Modeling and Data Acquisition with SAP BW/4HANA 2.x Pass4sure Exam Prep

C\_BW4HANA\_24 exam training is increasingly recognized for the high-quality, masterful customer service and impeccable attention to detail, When you pay attention to this page, it is advisable for you to choose C\_BW4HANA\_24 valid training material.

What format is used for Study Guides, With the C\_BW4HANA\_24 test guide use feedback, it has 98%-100% pass rate, These SAP Certified Application Associate - Reporting. Modeling and Data Acquisition with SAP BW/4HANA 2.x Exam exam questions dumps are of high quality and are designed for the convenience of the candidates.

You have the opportunity to download the three different versions from our test platform, C\_BW4HANA\_24 exam braindumps are high quality, you just need to spend about 48 to 72 hours on practicing, and you can pass the exam just one time.

SAP Certified Application Associate - Reporting. Modeling and Data Acquisition with SAP BW/4HANA 2.x test engine is tested and verified malware-free software, [SAP Certified Application Associate - Reporting. Modeling and Data Acquisition with SAP BW/4HANA 2.x](#) which you can rely on to download and installation, You won't be able to find the practice test software with user-friendly interface.

#### **NEW QUESTION: 1**

You have a DNS server named Server1.

Server1 has a primary zone named contoso.com.

Zone Aging/Scavenging is configured for the contoso.com zone.

One month ago, an administrator removed a server named Server2 from the network.

You discover that a static resource record for Server2 is present in contoso.com. Resource records for decommissioned client computers are removed automatically from contoso.com. You need to ensure that the static resource records for all of the servers are removed automatically from contoso.com.

What should you modify?

- A. The Expires after value of contoso.com
- B. The Record time stamp value of the static resource records
- C. The Security settings of the static resource records
- D. The time-to-live (TTL) value of the static resource records

**Answer: B**

**Explanation:**

Reset and permit them to use a current (non-zero) time stamp value. This enables these records to become aged and scavenged. You can use this procedure to change how a specific resource record is scavenged.

A stale record is a record where both the No-Refresh Interval and Refresh Interval have passed without the time stamp updating.

DNS->View->Advanced

Depending on the how the resource record was originally added to the zone, do one of the following:

If the record was added dynamically using dynamic update, clear the Delete this record when it

becomes stale check box to prevent its aging or potential removal during the scavenging process. If dynamic updates to this record continue to occur, the Domain Name System (DNS) server will always reset this check box so that the dynamically updated record can be deleted.

If you added the record statically, select the Delete this record when it becomes stale check box to

permit its aging or potential removal during the scavenging process.

**References:**

<http://technet.microsoft.com/en-us/library/cc759204%28v=ws.10%29.aspx>

<http://technet.microsoft.com/en-us/library/cc759204%28v=ws.10%29.aspx> Typically, stale DNS records occur when a computer is permanently removed from the network.

Mobile users who abnormally disconnect from the network can also cause stale DNS records. To help manage stale records, Windows adds a time stamp to dynamically added resource records in primary zones where aging and scavenging are enabled.

Manually added records are time stamped with a value of 0, and they are automatically excluded from the aging and scavenging process.

To enable aging and scavenging, you must do the following:

Resource records must be either dynamically added to zones or manually modified to be used in

aging and scavenging operations.

Scavenging and aging must be enabled both at the DNS server and on the zone.

Scavenging is disabled by default.

DNS scavenging depends on the following two settings:

No-refresh interval: The time between the most recent refresh of a record time stamp and the

moment when the time stamp can be refreshed again. When scavenging is enabled, this is set to 7 days by default. Refresh interval: The time between the earliest moment when a record time stamp can be

refreshed and the earliest moment when the record can be scavenged. The refresh interval must be longer than the maximum record refresh period. When scavenging is enabled, this is set to 7 days by default.

A DNS record becomes eligible for scavenging after both the no-refresh and refresh intervals have elapsed. If the default values are used, this is a total of 14 days.

## **NEW QUESTION: 2**

You administer a Microsoft SQL Server 2012 database. The database has a table named Customers owned by UserA and another table named Orders owned by UserB. You also have a stored procedure named GetCustomerOrderInfo owned by UserB.

GetCustomerOrderInfo selects data from both tables.

You create a new user named UserC. You need to ensure that UserC can call the GetCustomerOrderInfo stored procedure. You also need to assign only the minimum required permissions to UserC. Which permission or permissions should you assign to UserC? Choose all that apply.

**A.** The Take Ownership permission on Customers

**B.** The Select permission on Customers

**C.** The Execute permission on GetCustomerOrderInfo

**D.** The Select permission on Orders

**E.** The Take Ownership permission on Orders

**F.** The Control permission on GetCustomerOrderInfo

**Answer: B,C**

Explanation:

-- BURGOS - NO --\BURGOS

According to these references, this answer looks correct.
