Answer:

Explanation:

See explanation below.

Explanation

1. From Client3, open the System Configuration utility by pressing the Windows & R keys simultaneously to display the Run box .
2. Type "msconfig" into the box, and then click OK.
3. In the "System Configuration" window, switch to the "Boot" tab.
4. Enable the "Safe Boot" check box, and then make sure the "Minimal" option below that is selected. Click the "OK" button when you're done.
5. You will be prompted to Restart or Exit without restart. Click Exit without restart.

NEW QUESTION: 2

You have an Azure Active Directory (Azure AD) tenant named contosocloud.onmicrosoft.com.

Your company has a public DNS zone for contoso.com.

You add contoso.com as a custom domain name to Azure AD.

You need to ensure that Azure can verify the domain name.

Which type of DNS record should you create?

- A. TXT
- B. PTR
- C. DNSKEY
- D. NSEC

Answer: A

Explanation:

TXT : Correct Choice

You need to go to your hosting domain registrar and add in a TXT record.

NSEC3 : Incorrect Choice

This is Part of DNSSEC. This is used for explicit denial-of-existence of a DNS record. It is used to prove a name does not exist.

RRSIG : Incorrect Choice

This contains a cryptographic signature.

DNSKEY : Incorrect Choice

This will verify that the records are originating from an authorized sender.

NEW QUESTION: 3

On a Cisco UCS B250 server, how many physical DIMM slots make up one logical DIMM?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: A

NEW QUESTION: 4

You are required to migrate your 11.2.0.3 database as a pluggable database (PDB) to a multitenant container database (CDB).

The following are the possible steps to accomplish this task:

1. Place all the user-defined tablespaces in read-only mode on the source database.
2. Upgrade the source database to a 12c version.
3. Create a new PDB in the target container database.
4. Perform a full transportable export on the source database with the VERSION parameter set to 12 using the expdp utility.
5. Copy the associated data files and export the dump file to the desired location in the target database.
6. Invoke the Data Pump import utility on the new PDB database as a user with the DATAPUMP_IMP_FULL_DATABASE role and specify the full transportable import options.
7. Synchronize the PDB on the target container database by using the DBMS_PDS.SYNC_ODB function.

Identify the correct order of the required steps.

- A. 2, 1, 3, 4, 5, 6
- B. 1, 5, 6, 4, 3, 2
- C. 2, 1, 3, 4, 5, 6, 7
- D. 1, 4, 3, 5, 6, 7
- E. 1, 3, 4, 5, 6, 7

Answer: A

Explanation:

Step 0: (2) Upgrade the source database to 12c version.

Note:

Full Transportable Export/Import Support for Pluggable Databases

Full transportable export/import was designed with pluggable databases as a migration destination.

You can use full transportable export/import to migrate from a non-CDB database into a

PDB, from one PDB to another PDB, or from a PDB to a non-CDB.

Pluggable databases

act exactly like nonCDBs when importing and exporting both data and metadata.

The steps for migrating from a non-CDB into a pluggable database are as follows:

Step 1. (1) Set the user and application tablespaces in the source database to be READ

ONLY

Step 2. (3) Create a new PDB in the destination CDB using the create pluggable database

command

Step 3. (5) Copy the tablespace data files to the destination

Step 4. (6) Using an account that has the

DATAPUMP_IMP_FULL_DATABASE privilege,

either

(6) Export from the source database using expdp with the FULL=Y TRANSPORTABLE=ALWAYS options, and import into the target

database using impdp, or

Import over a database link from the source to the target using impdp Step 5. Perform post-migration validation or testing

according your normal practice
