NEW QUESTION: 1

A user notices recent print jobs are not printing to the local printer despite printing fine yesterday. There are no errors indicated on the taskbar printer icon. Which of the following actions should the user take FIRST?

- A.** Cancel all documents and print them again
- B.** Check that the printer is not offline print mode

- C. Check the status of the print server queue
- D. Check to ensure the printer selected is the default printer

Answer: C

NEW QUESTION: 2

- A. Option E
- B. Option A
- C. Option B
- D. Option F
- E. Option D
- F. Option C

Answer: A,B,F

Explanation:

The OSPF protocol is based on link-state technology, which is a departure from the Bellman-Ford vector based algorithms used in traditional Internet routing protocols such as RIP. OSPF has introduced new concepts such as authentication of routing updates, Variable Length Subnet Masks (VLSM), route summarization, and so forth. OSPF uses flooding to exchange link-state updates between routers. Any change in routing information is flooded to all routers in the network. Areas are introduced to put a boundary on the explosion of link-state updates. Flooding and calculation of the Dijkstra algorithm on a router is limited to changes within an area.

NEW QUESTION: 3

In which path location are Autosupport logs stored on an EMC Data Domain system?

- A. /ddvar/log/debug
- B. /data/coll/debug
- C. /ddvar/support
- D. /data/coll/support

Answer: C
