**Answer: A,E**

### NEW QUESTION: 2

You plan to use Terraform to deploy an Azure resource group. You need to install the required frameworks to support the planned deployment.

Which two frameworks should you install? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Vault
- B. Yeoman
- C. Tiller
- D. Node.js
- E. Terratest

**Answer: B,E**

Explanation:

Explanation

You can use the combination of Terraform and Yeoman. Terraform is a tool for creating infrastructure on Azure. Yeoman makes it easy to create Terraform modules.

Terratest provides a collection of helper functions and patterns for common infrastructure testing tasks, like making HTTP requests and using SSH to access a specific virtual machine. The following list describes some of the major advantages of using Terratest:

- \* Convenient helpers to check infrastructure - This feature is useful when you want to verify your real infrastructure in the real environment.
- \* Organized folder structure - Your test cases are organized clearly and follow the standard Terraform module folder structure.
- \* Test cases are written in Go - Many developers who use Terraform are Go developers. If you're a Go developer, you don't have to learn another programming language to use Terratest.
- \* Extensible infrastructure - You can extend additional functions on top of Terratest, including Azure-specific features.
