NEW QUESTION: 1

HOTSPOT

You are developing a SQL Server Integration Services (SSIS)

package. The data source for the data flow task is a table that has been configured as a change data capture (CDC) table. You are using a CDC Source component to obtain the CDC data. The CDC Source component has the following requirements: The output must include metadata columns that indicate which source columns have changed.

The output must return only one change row per source row that is modified in the current CDC

processing range.

You need to configure the CDC Source component.

Which CDC processing mode should you select? (To answer, configure the appropriate option or options in the dialog box in the answer area.) Hot Area:

NEW QUESTION: 3

According to Cisco best practices, which three protocols should the default ACL allow on an access port to enable wired BYOD devices to supply valid credentials and connect to the network? (Choose three.)

- A. TFTP
- B. HTTP
- C. BOOTP
- D. MAB
- E. DNS
- F. 802.1x

Answer: A,C,E

Explanation:

ACLs are the primary method through which policy enforcement is done at access layer switches for wired devices within the campus.

ACL-DEFAULT--This ACL is configured on the access layer switch and used as a default ACL on the port. Its purpose is to prevent un-authorized access.

An example of a default ACL on a campus access layer switch is shown below:

Extended IP access list ACL-DEFAULT

```
10 permit udp any eq bootpc any eq bootps log (2604 matches) 20
```

```
permit udp any host 10.230.1.45 eq domain
```

```
30 permit icmp any any
```

```
40 permit udp any any eq tftp
```

```
50 deny ip any any log (40 matches)
```

As seen from the output above, ACL-DEFAULT allows DHCP, DNS, ICMP, and TFTP traffic and denies everything else.

MAB is an access control technique that Cisco provides and it is called MAC Authentication Bypass.
