NEW QUESTION: 2

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You plan to use Azure platform tools to detect and analyze food items in smart refrigerators. To provide families with an integrated experience for grocery shopping and cooking, the refrigerators will connect to other smart appliances, such as stoves and microwave ovens, on a LAN.

You plan to build an object recognition model by using the Microsoft Cognitive Toolkit. The object recognition model will receive input from the connected devices and send results to applications.

The training data will be derived from more than 10 TB of images. You will convert the raw images to the sparse format.

End of repeated scenario.

You need to deploy a multiple-service solution that was developed already and published by other users in the Microsoft development community.

What should you use?

- A. an Azure Machine Learning experiment
- B. the edX Data Science Learning Dashboard
- C. Cortana Intelligence Gallery
- D. the Data Science Virtual Machine

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Azure AI Gallery enables our growing community of developers and data scientists to share their analytics solutions.
