**NEW QUESTION: 2**

You are developing a customer web form that includes the following HTML.

```
<input id="txtValue"/>
```

You need to change the HTML markup so that customers can enter only a valid three-letter country code.

Which HTML should you use?

- A. `<input id="txtValue" type="country"/>`
- B. `<input id="txtValue" type="text" pattern="[A-Za-z]{3}"/>`
- C. `<input id="txtValue" type="code" pattern="country"/>`
- D. `<input id="txtValue" type="text" required="xxx"/>`

**Answer: B**

Explanation:

Explanation

HTML `<input>` pattern Attribute

The pattern attribute specifies a regular expression that the `<input>` element's value is checked against.

Example

An HTML form with an input field that can contain only three letters (no numbers or special characters):

```
<form action="demo_form.asp">
Country code: <input type="text" name="country_code"
pattern="[A-Za-z]{3}" title="Three letter country code">
<input type="submit">
</form>
```

**NEW QUESTION: 3**

Cloud service providers such as Amazon Web Services (AWS) operate. Cloud service providers invest in hardware resources and then release those resources (often on a per-hour basis) to subscribers. One of the problems with this business model, however, is that at any given time, there are likely to be compute resources that are not being utilized. These resources represent hardware capacity that AWS has paid for but are sitting idle, and not making AWS any money at the moment. Rather than allowing these computing resources to go to waste, AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running

- A. AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running
- B. AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running
- C. AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running
- D. AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running

**Answer: D**

Explanation:

The key to understanding spot instances is to look at the way that cloud service providers such as Amazon Web Services (AWS) operate. Cloud service providers invest in hardware resources and then release those resources (often on a per-hour basis) to subscribers. One of the problems with this business model, however, is that at any given time, there are likely to be compute resources that are not being utilized. These resources represent hardware capacity that AWS has paid for but are sitting idle, and not making AWS any money at the moment. Rather than allowing these computing resources to go to waste, AWS offers them at a substantially discounted rate, with the understanding that if someone needs those resources for running

a normal EC2 instance, that instance will take priority over spot instances that are using the hardware resources at a discounted rate. In fact, spot instances will be stopped if the resources are needed elsewhere.
