Answer: A,D

Explanation:

Explanation

The reported distance (or advertised distance) is the cost from the neighbor to the destination. It is calculated from the router advertising the route to the network. For example in the topology below, suppose router A & B are exchanging their routing tables for the first time. Router B says "Hey, the best metric (cost) from me to IOWA is 50 and the metric from you to IOWA is 90" and advertises it to router A.

Router A considers the first metric (50) as the Advertised distance. The second metric (90), which is from NEVADA to IOWA (through IDAHO), is called the Feasible distance.

The reported distance is calculated in the same way of calculating the metric. By default (K1 = 1, K2 = 0, K3 = 1, K4 = 0, K5 = 0), the metric is calculated as follows:

NEW QUESTION: 2

Which of the following statements are correct regarding MAC address of VRRP packet? (Select 2 Answers)

- A. The destination MAC is broadcast MAC address.
- B. The source address is physical MAC address of Master.
- C. The source address is virtual MAC address.
- D. The destination MAC is multicast MAC address.

Answer: C,D

NEW QUESTION: 3
