Saving the precious time users already so, also makes the PEGAPCDC87V1 study materials look more rich, powerful strengthened the practicability of the products, to meet the needs of more users, to make the PEGAPCDC87V1 study materials stand out in many similar products.

NEW QUESTION: 1

DRAG DROP

Your team uses a proprietary source control product. You use FTP to manually deploy an Azure Web App.

You must move your source code from the proprietary source control product to a secure on-premises Git versioning system. Instead of deploying the website by using FTP, the website must automatically deploy to Azure each time developers check-in source files.

You need to implement the new deployment strategy.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Answer:

Explanation:

NEW QUESTION: 3

Composer is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. Composer uses a file named composer.json to store the dependencies of your application. The composer.json file is a JSON file that contains the following information:

- A.** Composer is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. Composer uses a file named composer.json to store the dependencies of your application. The composer.json file is a JSON file that contains the following information:

A. Composer is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. Composer uses a file named composer.json to store the dependencies of your application. The composer.json file is a JSON file that contains the following information:

B. App Volumes Manager is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. App Volumes Manager uses a file named appvolumes.json to store the dependencies of your application. The appvolumes.json file is a JSON file that contains the following information:

C. vCenter is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. vCenter uses a file named vcenter.json to store the dependencies of your application. The vcenter.json file is a JSON file that contains the following information:

D. View is a tool that helps you to create and manage your application's dependencies. It is a command-line tool that you can use to install and update the dependencies of your application. View uses a file named view.json to store the dependencies of your application. The view.json file is a JSON file that contains the following information:

' ä½ç" ""ã•™ã, <ã, ^ã•†ã•«æ§ <æ^•ã••ã, €ã•|ã•„ã•¾ã•™ã€,

Answer: B

NEW QUESTION: 4

In an experiment, if the minimum size for an Auto Scaling group is 1 instance, which of the following statements holds true when you terminate the running instance?

- A. Auto Scaling will raise an alarm and send a notification to the user for action.
- B. Auto Scaling will terminate the experiment.
- C. Auto Scaling must configure the schedule activity that terminates the instance after 5 days.
- D. Auto Scaling must launch a new instance to replace it.

Answer: D

Explanation:

If the minimum size for an Auto Scaling group is 1 instance, when you terminate the running instance, Auto Scaling must launch a new instance to replace it.
